DETAILED ACTION

1. Claims 1-21 are pending.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a transgenic rat and cells from said transgenic rat comprising CD4, classified in class 800, subclass 14.
- II. Claims 12 and 13, drawn to an assay identifying lentiviral ligand antagonist in CD4 transgenic rat by measuring HIV levels on PMBC, classified in class 800, subclass 14.
- III. Claim 14-17 and 19, drawn to method of identifying compounds that inhibit HIV infection in cells or rats measuring HIV levels, classified in class 800, subclass 14.
- IV. Claim 18, drawn to method of identifying compounds that reduce infection by measuring symptoms, classified in class 800, subclass 14.
- V. Claims 20 and 21, drawn to an assay identifying test compounds that interfere with lentivirus ligand binding to CD4 in cells, classified in class 800, subclass 14.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and V are patentably distinct products. Inventions are distinct if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, Group I is drawn to an animal whereas Group II

Art Unit: 1632

and V are drawn to products that utilize cell from said animal but will also contain other components like assay reactant and a description of the method of assay use.

3. Inventions III and IV are patentably distinct methods. Inventions are distinct if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions utilize different method steps and measure different outcome, HIV levels and symptoms of HIV.

4. Inventions I, II, V and III, IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the CD4 transgenic rat can be develop PMBC and other various cell lines and culture systems for commercial application.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
